All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement

The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Sulfate	1205499061 (Non SDG 634519001PS)	157* (90%-110%)

Technical Information

Sample Dilutions

The following samples 1205499060 (Non SDG 634519001DUP), 1205499061 (Non SDG 634519001PS), 634650005 (BRA-PZ-63I), 634650007 (BRA-PZ-68D), 634650009 (BRA-APBCD-FD-01), 634650010 (BRA-APBCD-FD-02), 634650011 (BRA-BRGWC-50), 634650013 (BRA-PZ-44) and 634650014 (BRA-PZ-50D) were diluted because target analyte concentrations exceeded the calibration range. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	634650						
	005	007	009	010	011	013	014

Job ID: 680-242425-1

Laboratory: Eurofins Savannah

Narrative

**Job Narrative
680-242425-1**

Receipt

The samples were received on 11/1/2023 1:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

General Chemistry

Method SM4500_S2_F: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 680-806681 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Method Summary

Client: Geosyntec Consultants Inc
Project/Site: Plant Branch Ash Ponds

Job ID: 680-242425-1

Method	Method Description	Protocol	Laboratory
4500 S2 F-2011	Sulfide, Total	SM	EET SAV

Protocol References:

SM = "Standard Methods For The Examination Of Water And Wastewater"

Laboratory References:

EET SAV = Eurofins Savannah, 5102 LaRoche Avenue, Savannah, GA 31404, TEL (912)354-7858

Definitions/Glossary

Client: Geosyntec Consultants Inc
Project/Site: Plant Branch Ash Ponds

Job ID: 680-242425-1

Qualifiers

General Chemistry

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Detection Summary

Client: Geosyntec Consultants Inc
Project/Site: Plant Branch Ash Ponds

Job ID: 680-242425-1

Client Sample ID: BRA-BRGWA-2S

Lab Sample ID: 680-242425-1

No Detections.

Client Sample ID: BRA-BRGWA-2I

Lab Sample ID: 680-242425-2

No Detections.

Client Sample ID: BRA-PZ-44

Lab Sample ID: 680-242425-3

No Detections.

Client Sample ID: BRA-PZ-64I

Lab Sample ID: 680-242425-4

No Detections.

Client Sample ID: BRA-PZ-66I

Lab Sample ID: 680-242425-5

No Detections.

Client Sample ID: BRA-PZ-59I

Lab Sample ID: 680-242425-6

No Detections.

Client Sample ID: BRA-PZ-58I

Lab Sample ID: 680-242425-7

No Detections.

Client Sample ID: BRA-BRGWA-6S

Lab Sample ID: 680-242425-8

No Detections.

Client Sample ID: BRA-PZ-51I

Lab Sample ID: 680-242425-9

No Detections.

Client Sample ID: BRA-PZ-51D

Lab Sample ID: 680-242425-10

No Detections.

Client Sample ID: BRA-PZ-57I

Lab Sample ID: 680-242425-11

No Detections.

Client Sample ID: BRA-PZ-65I

Lab Sample ID: 680-242425-12

No Detections.

Client Sample ID: BRA-PZ-61I

Lab Sample ID: 680-242425-13

No Detections.

This Detection Summary does not include radiochemical test results.

Login Sample Receipt Checklist

Client: Geosyntec Consultants Inc

Job Number: 680-242425-1

Login Number: 242425

List Number: 1

Creator: Johnson, Corey M

List Source: Eurofins Savannah

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Quantitative X-Ray Diffraction by Rietveld Refinement

Report Prepared for: Environmental Services

Project Number/ LIMS No. Custom XRD/MI4525-AUG23

Sample Receipt: August 10, 2023

Sample Analysis: August 23, 2023

Reporting Date: September 13, 2023

Instrument: BRUKER AXS D8 Advance Diffractometer

Test Conditions: Co radiation, 35 kV, 40 mA; Detector: LYNXEYE
Regular Scanning: Step: 0.02°, Step time: 0.75s, 2θ range: 6-80°

Interpretations: PDF2/PDF4 powder diffraction databases issued by the International Center for Diffraction Data (ICDD). DiffracPlus Eva and Topas software.

Detection Limit: 0.5-2%. Strongly dependent on crystallinity.

Contents:

- 1) Method Summary
- 2) Quantitative XRD Results
- 3) XRD Pattern(s)

Zhihai (Adrian) Zhang, Ph.D
Mineralogist

Kim Gibbs, H.B.Sc., P.Geo.
Senior Mineralogist

ACCREDITATION: SGS Natural Resources Lakefield is accredited to the requirements of ISO/IEC 17025 for specific tests as listed on our scope of accreditation, including geochemical, mineralogical and trade mineral tests. To view a list of the accredited methods, please visit the following website and search SGS Canada Inc. - Minerals: <https://www.scc.ca/en/search/palcan>.

Method Summary

The Rietveld Method of Mineral Identification by XRD (ME-LR-MIN-MET-MN-D05) method used by SGS Natural Resources is accredited to the requirements of ISO/IEC 17025.

Mineral Identification and Interpretation:

Mineral identification and interpretation involves matching the diffraction pattern of an unknown material to patterns of single-phase reference materials. The reference patterns are compiled by the Joint Committee on Powder Diffraction Standards - International Center for Diffraction Data (JCPDS-ICDD) database and released on software as Powder Diffraction Files (PDF).

Interpretations do not reflect the presence of non-crystalline and/or amorphous compounds, except when internal standards have been added by request. Mineral proportions may be strongly influenced by crystallinity, crystal structure and preferred orientations. Mineral or compound identification and quantitative analysis results should be accompanied by supporting chemical assay data or other additional tests.

Quantitative Rietveld Analysis:

Quantitative Rietveld Analysis is performed by using Topas 4.2 (Bruker AXS), a graphics based profile analysis program built around a non-linear least squares fitting system, to determine the amount of different phases present in a multicomponent sample. Whole pattern analyses are predicated by the fact that the X-ray diffraction pattern is a total sum of both instrumental and specimen factors. Unlike other peak intensity-based methods, the Rietveld method uses a least squares approach to refine a theoretical line profile until it matches the obtained experimental patterns.

Rietveld refinement is completed with a set of minerals specifically identified for the sample. Zero values indicate that the mineral was included in the refinement calculations, but the calculated concentration was less than 0.05wt%. Minerals not identified by the analyst are not included in refinement calculations for specific samples and are indicated with a dash.

DISCLAIMER: This document is issued by the Company under its General Conditions of Service accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

WARNING: The sample(s) to which the findings recorded herein (the "Findings") relate was(were) drawn and / or provided by the Client or by a third party acting at the Client's direction. The Findings constitute no warranty of the sample's representativeness of any goods and strictly relate to the sample(s). The Company accepts no liability with regard to the origin or source from which the sample(s) is/are said to be extracted.

Summary of Rietveld Quantitative Analysis X-Ray Diffraction Results

Covellite	0.8	0.3	-	-	-	-
Diopside	3.4	1.7	-	-	-	-
Montmorillonite	-	-	-	2.9	-	0.3
Rutile	-	-	-	0.4	-	-
Anorthite	-	-	-	2.5	-	-
Microcline	-	-	-	-	-	19.4
TOTAL	100	100	100	100	100	100

Zero values indicate that the mineral was included in the refinement, but the calculated concentration is below a measurable value.

Dashes indicate that the mineral was not identified by the analyst and not included in the refinement calculation for the sample.

The weight percent quantities indicated have been normalized to a sum of 100%. The quantity of amorphous material has not been determined.

Mineral/Compound	Formula

Sirem, div of Geosyntec Consultants
180A Market Place Blvd
Knoxville, Tennessee 37922

Generated 7/26/2023 8:35:00 AM

JOB DESCRIPTION

Plant Branch Aquifer Analysis

JOB NUMBER

240-188888-1

Eurofins Cleveland

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

Job ID: 240-188888-1

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
F3	Duplicate RPD exceeds the control limit
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 7/20/2023 3:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 25.6° C.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

After printing this label:

1. Use the 'Print' button on this page to print your label to your laser or inkjet printer.
2. Fold the printed page along the horizontal line.
3. Place label in shipping pouch and affix it to your shipment so that the barcode portion of the label can be read and scanned.

Warning: IMPORTANT: TRANSMIT YOUR SHIPPING DATA AND PRINT A MANIFEST:

At the end of each shipping day, you should perform the FedEx Ground End of Day Close procedure to transmit your shipping data to FedEx. To do so, click on the Ground End of Day Close Button. If required, print the pickup manifest that appears. A printed manifest is required to be tendered along with your packages if they are being picked up by FedEx Ground. If you are dropping your packages off at a FedEx drop off location, the manifest is not required.

Use of this system constitutes your agreement to the service conditions in the current FedEx Service Guide and applicable tariff, available upon request. FedEx will not be responsible for any claim in excess of \$100 per package, whether the result of loss, damage, delay, non-delivery, misdelivery, or misinformation, unless you declare a higher value, pay an additional charge, document your actual loss and file a timely claim. Limitations, including limitations on our liability, can be found in the current FedEx Service Guide and applicable tariff apply. In no event shall FedEx Ground be liable for any special, incidental, or consequential damages, including, without limitation, loss of profit, loss to the intrinsic value of the package, loss of sale, interest income or attorney's fees. Recovery cannot exceed actual documented loss. Items of extraordinary value are subject to separate limitations of liability set forth in the Service Guide and tariff. Written claims must be filed within strict time limits, see current FedEx Service Guide.

1. INTRODUCTION

1.1 Purpose

This document presents an alternate source demonstration (ASD) for the statistically significant levels (SSL) of beryllium, cadmium, cobalt, and lithium above applicable groundwater protection standards (GWPS) detected in select monitoring wells located at Georgia Power Company (Georgia Power) Plant Branch (Site) Ash Ponds B, C, and D (AP-BCD). AP-BCD is a multiunit impoundment reported as a single unit under the Coal Combustion Residuals (CCR) Rule. However, based on groundwater flow directions, the monitoring wells demonstrating SSLs are located side-gradient to Ash Pond B (AP-B) specifically and downgradient of a former coal pile, situated adjacent to AP-B (**Figure 1**). Therefore, this document will primarily focus on evaluating AP-B rather than the larger multiunit AP-BCD. This ASD, through a thorough characterization of groundwater and aquifer solids data, provides a series of compelling lines of evidence demonstrating that the source of the observed SSLs is the former coal pile (removed in 2017), an alternate source from AP-B. The area including these SSL wells will be referred to herein as the Former Coal Pile Area (FCPA) (**Figure 2**).

Statistical analysis of the 2023 groundwater quality monitoring data identified the following SSLs of Appendix IV constituents at concentrations exceeding the applicable GWPS in FCPA monitoring wells¹:

- Beryllium (GWPS of 0.004 milligrams per liter [mg/L]): PZ-58I and PZ-60I
- Cadmium (GWPS of 0.005 mg/L): BRGWC-50 and PZ-60I
- Cobalt (GWPS of 0.014 mg/L): BRGWC-50, PZ-51I, PZ-58I, PZ-60I, and PZ-61I
- Lithium (GWPS of 0.089 mg/L): PZ-60I

The purpose of this ASD is to provide an overview of the groundwater and aquifer solids characterization data in the vicinity of the FCPA to show that the source of SSL

¹ In accordance with the United States Environmental Protection Agency (USEPA) Coal Combustion Residual Rule (federal CCR Rule) (40 Code of Federal Regulations [CFR] Part 257, Subpart D) and the Georgia Environmental Protection Division (GA EPD) Rules for Solid Waste Management 391-3-4-.10, a statistically significant level (SSL)-related constituent is determined by comparing the confidence intervals developed to either the constituent's Maximum Contaminant Level (MCL), if available; where an MCL has not been established, then a CCR-rule specific GWPS; or background concentrations for constituents where the concentration is greater than the MCL or rule specified GWPS.

constituents observed in this area is the former coal pile and not AP-B. This ASD has been prepared pursuant to regulations in Title 40 Code of Federal Regulations (CFR) Part 257 Subpart D [the CCR Rule], specifically § 257.95(g)(3)(ii), which allows the owner or operator to “demonstrate that a source other than the CCR unit caused the contamination, or that the statistically significant increase resulted from error in sampling, analysis, statistical evaluation, or natural variation in groundwater quality.” Moreover, this ASD also serves as an ASD under the Georgia regulations per Rule 391-3-4-.10(6) of the Georgia Administrative Code, which incorporates § 257.95(g)(3)(ii) of the CCR Rule by reference. For ease of reference herein, the CCR Rule regulations are cited within this report, in lieu of citing both sets of regulations.

1.2 Summary of Groundwater Investigation

Based on review of Site information, the SSLs of beryllium, cadmium, cobalt, and lithium identified in the detection and assessment monitoring wells listed above do not originate from a CCR source and are not associated with a release from AP-B. Instead, the SSLs are attributed to (i) migration of low pH contact water generated by infiltration of water through the former coal pile containing dissolved trace elements from the particulate coal and (ii) low pH groundwater conditions caused by and downgradient of the former coal pile facilitating mobilization of trace elements naturally occurring in the aquifer solids. The following lines of evidence support the conclusion that the SSLs of beryllium, cadmium, cobalt, and lithium in groundwater at the Site are due to infiltration and leaching of water through the former coal pile:

- Former Coal Pile Investigation:
 - Coal is a natural resource consisting of several minerals that are commonly enriched in trace elements including arsenic, beryllium, cadmium, cobalt, and lithium (Cook and Fritz, 2002; USGS, 2006; USEPA, 1978; Xie, et.al., 2023; Ward et. al., 2011; Harkness et.al., 2015). In addition, coal can contain various amounts of sulfide minerals that can undergo oxidation processes due to open storage of coal in piles. Oxidation of these minerals can occur in coal pile storage areas due to the infiltration of precipitation and use of dust suppression processes that introduce oxygenated water through the coal pile. This oxidation process can result in the potential release of trace elements and a decreased pH in coal contact water, which can further facilitate the dissolution of trace elements

(either from coal or the downgradient aquifer matrix). This can, in certain circumstances and geochemical conditions, cause impacts to downgradient groundwater (Cook and Fritz, 2002; Cravotta, 2008; Gammons, 2010). These processes are believed to have occurred at the Plant Branch former coal pile and have led to low pH in groundwater and exceedances of major and trace elements along the flow path of former coal pile contact water.

- In 2018, a Site investigation completed within and east of the former coal pile as part of Plant Branch decommissioning efforts identified arsenic and cadmium in groundwater at elevated concentrations (above the Hazardous Site Response Act [HSRA] notification concentrations [NC]) and attributed the former coal pile as the source for these constituents in groundwater. (GPC, 2018).
- AP-B Interstitial Water Versus FCPA Groundwater:
 - The concentration and distribution of SSL constituents in interstitial water samples indicates that interstitial water is not the source of these constituents observed in groundwater wells in the FCPA. For example, cadmium and cobalt are non-detect or detected at trace levels below the GWPS in recent piezometers (IW-B-3, IW-B-4, and IW-B-5) installed within the CCR in AP-B.
 - A gradient of high to low groundwater concentrations of SSL constituents should be observed to emanate from the source and migrate with groundwater flow downgradient. Groundwater flow from AP-B is generally toward Lake Sinclair and side-gradient of the FCPA. SSL constituent groundwater concentrations observed in the FCPA are higher than those observed in and downgradient of AP-B (with the highest concentrations in FCPA piezometers observed at the greatest distance from AP-B), which confirms the lack of groundwater concentration gradient for SSL constituents from AP-B to the FCPA wells.
 - Boron, an Appendix III constituent, is known to be a leading indicator of impacts from CCR and is commonly used as a tracer to identify the leading edge and direction of migration of CCR impacted groundwater. Boron concentrations are observed to be the lowest in the FCPA relative to other

locations downgradient of AP-BCD. In addition, statistical evidence (evaluated by histogram development) confirms different groundwater signatures in the FCPA relative to within and downgradient of AP-B.

- A refined flow regime analysis within the FCPA and areas downgradient of AP-B suggests that the observed exceedances of SSL constituents are east of AP-B and predominantly hydraulically downgradient of and the result of impacts from the former coal pile.
- Groundwater Geochemistry:
 - The geochemical signature of groundwater in the FCPA wells reflects low boron, low pH, and high sulfate, whereas the geochemical signature of groundwater in other areas of AP-B and other ash ponds at Plant Branch is different, reflecting higher boron, near-neutral pH, and low sulfate concentrations.
 - Stable oxygen and sulfur isotopes of sulfate ions in groundwater indicate that the source of sulfate in the FCPA is from pyrite oxidation of coal rather than pyrite combustion (i.e., sulfate released from coal ash). This confirms the impacts in the FCPA are the result of the former coal pile as opposed to AP-B.

1.3 Site Description

Plant Branch formerly operated as a coal-fired power plant that commenced power generation in 1965 and ceased in 2015. During operations, surface impoundments were utilized for the storage of CCR, including AP-BCD. AP-BCD is located on the southeast corner of the Plant (**Figure 1**) and, while three distinct impoundments, is regulated as a single unit under the CCR Rule. AP-BCD is not active and will be closed by removal of CCR, which will be placed in a new, permitted, on-Site CCR landfill.

AP-B is an approximate 52-acre ash pond on the east side of the regulated multiunit. The majority of the surface in AP-B (approximately 75 to 80%) is dry and vegetated with grass, brush, and medium pines. These areas are easily accessible by vehicle and by foot, with some portions capped with up to 3 feet of soil (non-CCR). A small portion of the pond is still used for stormwater management, with 5 to 10 acres being wet, depending on seasonal rainfall conditions.

In addition to CCR surface impoundments, a coal storage unit operated at Plant Branch, which bordered the northeastern portion of AP-B along its entire length (**Figures 2, 3a, and 3b**). A historical evolution of the former coal pile during Plant operations and following decommissioning is presented in **Figures 3a and 3b**. The first aerial photograph on **Figure 3a** shows the Site in 1960 before the Plant and former coal pile were constructed. In early 1965, the former coal pile began receiving coal in preparation for electricity generation. The aerial photograph from November 11, 1965, shows the former coal pile within the first year of Plant operations. As shown on the time progression of aerial figures presented on **Figures 3a and 3b**, the former coal pile expanded into an additional area northwest of the original footprint. This expanded area was constructed in 2012.

Former coal pile decommissioning was commenced by Southern Company in 2014, and the four coal-fired units at Plant Branch were retired the following year (GPC, 2018). Subsequently, the former coal pile was removed. **Figure 3b** shows that the majority of coal was removed by October 15, 2015, with complete coal removal by 2017.

The current condition of the former coal pile area is shown in the most recent aerial photograph in **Figure 3b**. Beginning in 2018, the expanded portion of the former coal pile area was retrofitted for activities including construction of a water treatment plant to support the ash pond closure activities. In 2023, a layer of lime (for geotechnical stabilization of the soil) and 12 inches of crushed stone was installed along the remaining portion of the original footprint of the former coal pile to complete restoration of the decommissioned former coal pile. This area is currently used for staging and storage of rock aggregate for onsite CCR landfill construction activities.

1.3.1 Former Coal Pile Investigations

Prior to decommissioning, a field investigation was completed to evaluate the approximate extent of coal in the former coal pile, and the findings are presented in **Figure 4**. Boring logs from these field investigation activities are provided in **Appendix A**. Based on approximately 17 borings, the former coal pile thickness ranged from 1 to 35 feet. The thickest locations of coal were observed on the eastern side, closest to Plant operations. In the southern portion, closest to the FCPA, coal thickness ranged from approximately 3 to 5 feet. During the investigation, the water table was observed above the bottom of the coal, indicating contact between the former coal pile and the water table and notably, an elevated hydraulic head beneath the former coal pile. These locations

were noted in borings obtained from areas within the former coal pile that were closest to the former Plant operations.

In February 2018, as part of the decommissioning of the Plant, Resolute Environmental & Water Resources Consulting, LLC (Resolute) completed a direct push technology (DPT) investigation for pH and conductivity and collected limited groundwater samples in the vicinity of the former coal pile. The locations and results are presented in **Figure 5**. Groundwater was sampled from two installed groundwater monitoring wells (C1-06 and C2-02). C1-06 contained concentrations of arsenic and cadmium exceeding their applicable HSRA NCs. On March 16, 2018, a HSRA Release Notification was submitted to Georgia Environmental Protection Division (GA EPD) to document that the groundwater in this well contained elevated concentrations of arsenic (0.013 mg/L; NC of 0.010 mg/L) and cadmium (0.0108 mg/L; NC of 0.005 mg/L). On November 15, 2018, GA EPD prepared an inspection report, recommendation memorandum, and Reportable Quantities Screening Method (RQSM) score sheet. This report indicated the presence of a known detection of arsenic and cadmium in groundwater. The groundwater pathway was scored at 8.1 on the RQSM score sheet, which did not exceed the threshold of 10. In addition, the Site was scored for an on-Site exposure of arsenic detected in soils. This pathway was scored at a 0, which did not exceed the threshold of 20. Based on this information, on November 16, 2018, GA EPD determined that the property would not be listed on the Hazardous Site Inventory (GPC, 2018; GA EPD, 2018). The response from GA EPD is provided in **Appendix B**.

1.4 Groundwater Monitoring and Basis of Statistically Significant Levels

The monitoring well network was installed with a conservative approach assuming radial to semi-radial flow from AP-BCD and therefore, included side-gradient areas located adjacent to and downgradient of the former coal pile. Pursuant to § 257.94(e)(3), an assessment monitoring program was initiated for AP-BCD based on statically significant increases (SSI) of Appendix III constituents documented in the *2019 Annual Groundwater Monitoring and Corrective Action Report* (Golder, 2019). Statistical analyses of the Appendix IV assessment monitoring groundwater data collected in March 2020 identified SSLs for cobalt and cadmium at concentrations exceeding applicable GWPS. The SSLs of beryllium and lithium were identified following statistical analysis of the January 2023 and August 2023 groundwater data, respectively.

Pursuant to § 257.96, Georgia Power initiated an assessment of corrective measures (ACM) program for AP-BCD on July 9, 2020, and subsequently submitted the

Assessment of Corrective Measures Ash Pond BCD (ACM Report) (Golder, 2020) on December 4, 2020. Subsequent groundwater characterization activities have been performed for the individual ash ponds resulting in a refined understanding of AP-BCD potential impacts and flow paths.

Since the ACM was initiated, additional assessment monitoring wells and piezometers have been installed to define groundwater flow direction and gradients as well as delineate the horizontal and vertical extents of the beryllium, cadmium, cobalt, and lithium SSLs in the FCPA. Further, three piezometers (IW-B-3 through IW-B-5) were installed in 2023 within the footprint of AP-B to provide additional information on the geochemical characteristics of AP-B interstitial water. These new piezometers screened within the CCR in AP-B supplemented the two existing interstitial piezometers installed in the northern and southern portions of AP-B. The current groundwater monitoring well and piezometer networks installed downgradient/side-gradient of AP-B, and the network of AP-B interstitial piezometers, are shown on **Figure 2**. Construction logs for monitoring wells and piezometers are provided in **Appendix A**.

In addition to the Appendix IV constituents identified as SSLs, GWPS exceedances of other Appendix IV constituents were observed during a comprehensive sampling event completed in February 2023 for all monitoring wells and piezometers in the FCPA. While not SSLs, arsenic (up to 0.02 mg/L), selenium (up to 0.1 mg/L), and combined radium (up to 8 picocuries per liter [pCi/L]) exceedances have been noted in the FCPA. The observed constituents occur naturally in coal.

The analytical data obtained from the additional wells and piezometers installed in the FCPA and within the footprint of AP-B along with the supplemental analytical analyses in the FCPA suggest that the identified SSLs are not associated with groundwater flow from AP-B. To support this observation, characterization of the aquifer solids, geochemical and statistical evaluations of the analytical data, and collection of stable isotope data were completed. Compilation of these various lines of evidence (see further discussion in Section 2) support the conclusion that the SSLs of beryllium, cadmium, cobalt, and lithium (and other elevated concentrations of trace elements identified in the FCPA) observed in the vicinity of AP-B are due to impacts from the former coal pile and are not associated with CCR in AP-B.

2. ALTERNATE SOURCE DEMONSTRATION

Based on review of Site information, the SSLs of beryllium, cadmium, cobalt, and lithium identified in monitoring wells BRGWC-50, PZ-51I, PZ-58I, PZ-60I, and PZ-61I are not associated with a release from AP-B. Instead, these SSLs are attributed to historical infiltration of water through the former coal pile and into the underlying groundwater. This section documents the following lines of evidence to support this conclusion:

- Former Coal Pile Investigations
 - Low pH conditions (3.68 to 5.7 standard units [s.u.] in monitoring wells and piezometers screened in the impacted zone in 2023) and elevated trace element concentrations are observed in the FCPA wells suggesting that the impacts are from former coal pile contact water as opposed to originating from CCR stored in AP-B (pH 5.8 to 8.4 s.u. in 2023).
 - In 2018, a Site investigation completed as part of the Plant decommissioning identified the former coal pile as the source of arsenic and cadmium in groundwater and notified GA EPD of a release under the HSRA.
- Groundwater analytical data in the FCPA are not consistent with AP-B interstitial water results based on the following: (i) the analytical characterization of the AP-B interstitial water samples compared to FCPA groundwater; (ii) histogram development for SSL constituents and select Appendix III constituents (CCR tracers); and (iii) an evaluation of concentrations gradients and the groundwater flow regime.
- Groundwater geochemistry and analytical results observed in the FCPA are not consistent with a CCR signature.
- Stable isotopes of sulfate are indicative of sulfate generation from pyrite oxidation from coal as opposed to a combustion signature that would be indicative of sulfate generation from ash.

The subsections below provide additional information on each of these lines of evidence. Laboratory reports for data supporting these lines of evidence are provided in **Appendix C**.

2.1 Former Coal Pile Investigations Indicate Release to Groundwater

Coal is a natural material consisting of several minerals that are commonly enriched in trace elements including arsenic, beryllium, cadmium, cobalt, and lithium (Cook and Fritz, 2002; USGS, 2006; USEPA, 1978; Xie, et. al., 2023; Ward et. al., 2011; Harkness et.al., 2015). In addition, depending on the source, coal may contain varying quantities of sulfide minerals that can undergo oxidation processes due to open storage of coal in piles. Under certain conditions, oxidation of these minerals may occur in coal pile storage areas due to the infiltration of precipitation and use of dust suppression processes that introduce oxygenated water through the coal pile. This oxidation process can release metalloids and trace elements and can cause the pH of water in contact with coal to decrease to conditions below approximately 5 – 5.5 s.u. This creates unique geochemical conditions, specifically low pH, that can facilitate further dissolution of trace elements (either from coal or naturally occurring elements precipitated with iron and manganese oxides of an aquifer matrix) that can migrate to groundwater (Cook and Fritz, 2002).

Consideration of these characteristics of former coal pile contact water results in two main mechanisms of impacts from the former coal pile at Plant Branch to groundwater: (i) migration of low pH water generated by infiltration of water through the former coal pile causing oxidation of sulfide minerals and dissolution of trace elements associated with coal; and (ii) low pH groundwater conditions downgradient of the former coal pile further facilitating mobilization of trace elements naturally occurring in the aquifer solids.

In the FCPA, exceedances of trace elements from coal including SSL constituents along with low pH conditions support migration of former coal pile contact water into the FCPA monitoring wells and piezometers (**Table 1**). Mobilization of these SSL constituents in the FCPA could also be due to dissolution of naturally occurring iron- and/or manganese-bearing minerals in the aquifer solids as a result of these unique geochemical conditions, specifically low pH. This is supported by high concentrations of dissolved iron and manganese observed in FCPA wells with SSLs (**Table 1**) and the Sequential Extraction Procedure (SEP) data (**Table 2**), suggesting substantial levels of the SSL constituents were associated with solid phase metal oxides in both upgradient and FCPA locations.

In addition, in 2018, a Site investigation was completed within the footprint of the former coal pile as part of Plant Branch decommissioning efforts that confirmed impacts of trace elements and low pH from the former coal pile to groundwater primarily on the eastern side of the former coal pile (not adjacent to AP-B) (see further discussion in Section 1.3.3). As part of this effort, groundwater was collected from various DPT locations for

pH and conductivity and two newly installed monitoring wells (C1-06 and C2-02). Water quality observations indicated low pH conditions in numerous locations around the former coal pile (as low as 3.5 s.u.; **Figure 5**). Further, the findings of this investigation identified arsenic and cadmium in groundwater above the HSRA NC and CCR GWPS, confirming a release of trace elements that are also identified as Appendix IV CCR constituents from the former coal pile to groundwater (GPC, 2018). While these groundwater conditions did not result in the Site being placed on the HSRA Site Inventory (GA EPD, 2018), it did show impacts from former coal pile contact water to groundwater supporting an alternate source of Appendix IV CCR constituents to groundwater other than AP-B.

2.2 AP-B Interstitial Water Data and Hydraulic Gradients Inconsistent with Migration of CCR Impacts

This section presents an evaluation and comparison of select Appendix III and SSL constituent analytical data collected from piezometers screened in the CCR material of AP-B relative to FCPA monitoring well data. It illustrates that groundwater concentrations in the FCPA are not consistent with the groundwater characteristics of interstitial water in AP-B. Histogram development for SSL constituents and select Appendix III constituents in the two spatial areas support this conclusion. Finally, a refined evaluation of the hydraulic gradient and flow regime proximal to AP-B and the FCPA shows that locations with the highest SSL constituent concentrations are primarily hydraulically downgradient of the former coal pile and side-gradient to AP-B.

2.2.1 Concentrations of SSL and Appendix III Constituents in AP-B Interstitial Water Inconsistent with Concentrations Observed in the FCPA

AP-B interstitial water samples were collected from the various piezometers screened within the CCR material of AP-B between 2019 and 2023 and analyzed for Appendix III and select Appendix IV constituents² (**Table 3**). The concentrations and spatial distribution of Appendix III constituents, beryllium, cadmium, cobalt, and lithium in AP-B interstitial water are inconsistent with groundwater impacts observed in the FCPA.

Beryllium, cadmium and cobalt concentrations were either non-detect or detected at trace levels below the GWPS in interstitial water from the AP-B piezometers. This is in contrast

² The samples were not analyzed for beryllium or lithium in 2023 as a beryllium and lithium SSL was not yet identified.

to the concentrations of these SSL constituents, which exceed the GWPS in the wells and piezometers in the FCPA (**Table 1**), suggesting that AP-B interstitial water is not the source of the SSLs observed in the FCPA. Only one sample was collected from an interstitial piezometer and measured for lithium (IW-B-2 in October 2019). The lithium detection was observed to be above the GWPS, however, as discussed below, a gradient of lithium concentration from AP-B to the FCPA is not observed and therefore, this data does not support AP-B as the source of SSL constituents in the FCPA.

Boron is an Appendix III constituent commonly used as a tracer to indicate impacts to groundwater downgradient of a CCR unit, including the leading edge and direction of impact migration. The spatial distribution of boron concentrations in the vicinity of AP-B and across AP-BCD (inset only) is provided on **Figure 6**. These data indicate boron concentrations in groundwater are lowest in the FCPA (typically <0.5 mg/L) relative to locations within and downgradient of AP-BCD (typically >1 mg/L). The wells with the highest concentrations of SSL constituents correspond with boron concentrations below 0.5 mg/L. In nearby locations where SSL constituents are non-detect (BRGWC-52I and PZ-44), boron concentrations are 1.87 mg/L and 1.35 mg/L, respectively. These data indicate (i) little or no impacts from AP-B in the FCPA and (ii) clearly differentiate two sources of boron, suggesting that boron concentrations in the FCPA wells reflect groundwater from the former coal pile.

To visually assess similarities and differences in the analytical data, histograms were developed for select Appendix III and SSL constituents from monitoring wells and piezometers in the FCPA relative to the AP-B area (BRGWC-25I, BRGWC-52I, along with the five interstitial wells within AP-B). The results of this evaluation are presented in **Figure 7**. Review of the histograms indicates the difference in concentrations of the evaluated constituents between the wells and piezometers in the FCPA grouping and AP-B wells. The FCPA is characterized by low boron and pH along with high concentrations of sulfate and the SSL constituents, which is opposite of what is observed in the AP-B wells, confirming sources of these constituents are likely not the same in the two areas.

2.2.2 Concentration Gradients of SSL Constituents Not Observed from AP-B

To further evaluate the influence of the former coal pile on beryllium, cadmium, cobalt, and lithium groundwater concentrations in the FCPA, a spatial evaluation of concentration gradients for these constituents was completed through the generation of iso-concentration contours (**Figure 8**; data provided in **Table 1**). This figure illustrates that concentrations are highest directly downgradient of the former coal pile without a

gradient of high to low concentrations from AP-B toward the FCPA. If impacts were from AP-B, a high to low concentration gradient would be expected. Specifically, PZ-58I which is closer to AP-B has lower concentrations of the four SSL constituents relative to PZ-60I, which is further away from AP-B. In fact, the highest concentration of cobalt is observed in the location furthest and side-gradient of AP-B (PZ-64I); as discussed further below, this location is hydraulically downgradient of the former coal pile.

2.2.3 Hydraulic Gradients Inconsistent with AP-B Impacts Relative to the Former Coal Pile

Potentiometric data recorded in August 2023 and the associated flow regime were reviewed and refined from the previously used 10-ft isometric interval to a 1-ft isometric interval. This analysis was performed to evaluate the potential sources of SSLs in the FCPA. Based on review of the 1-ft interval isometric potentiometric surface map presented on **Figure 9**, groundwater flow directions are generally to the southeast. Therefore, the areas with highest constituent concentrations are predominantly downgradient of the former coal pile and side-gradient of AP-B. Based on slug tests and the shape of the potentiometric surface map, there is no indication of preferential flow pathways to the FCPA or downgradient of AP-B.

While the edge of the cobalt plume shown on **Figure 9** extends to PZ-63I (a location that would be considered hydraulically downgradient of the current AP-B boundary), potential dispersion and/or minor changes in the groundwater flow direction with time and seasonality likely resulted in broadening of observed cobalt impacts in the FCPA as opposed to cobalt impacts being associated with AP-B. Potential dispersion effects are reasonable in the FCPA since the AP-B dike transitions to the native or fill material in the vicinity of FCPA and the land surface is relatively flat in that area. In addition, there is a likelihood for historical radial groundwater flow from beneath the former coal pile due to the groundwater mounding introduced by dust suppression activities during former coal pile operations. This could also contribute to broadening of the observed SSL impacts.

2.3 Geochemical Groundwater Data Consistent with a Former Coal Pile Signature

Analytical data indicate a unique signature for groundwater in the FCPA (**Table 1**). Specifically, monitoring wells and piezometers in the FCPA generally have lower pH (pH as low as 3.99 s.u. in PZ-58I in August 2023) and higher sulfate concentrations (as high

as 2,550 mg/L in PZ-64I in August 2023) compared to piezometers installed within the CCR in AP-B and other sampled locations proximal to AP-B. This is particularly evident in wells screened in the transition zone (near the interface of the partially weathered rock and bedrock) where beryllium, cadmium, cobalt, and lithium exceedances of the GWPS are observed.

Based on a review of the Site groundwater quality data, it is evident that the lower pH levels in the groundwater at the FCPA are inconsistent with pH levels observed within and downgradient of AP-B, as well as Ash Pond C (AP-C) and Ash Pond D (AP-D). Rather, low pH is indicative of impacts downgradient of the former coal pile, as illustrated in **Figure 10**. In 2018, Resolute completed a DPT investigation in the vicinity of the former coal pile to assess select constituents in groundwater including pH. These data have been combined with data collected from interstitial, detection, and assessment wells in 2023 to provide a spatial evaluation of pH conditions within, side-gradient, and downgradient of AP-B. **Figure 10** indicates that the lowest observed pH conditions are downgradient of the former coal pile. In contrast, pH values within the AP-B interstitial water are significantly higher and range from 5.8 to 8.4 s.u.

Figure 11 provides a visual and statistical summary of pH measurements collected between 2018 and 2023 from the AP-B interstitial piezometers, wells near AP-B, wells in the FCPA, and locations in/around the former coal pile (statistics backup files provided in **Appendix D**). This analysis indicates the highest pH values are in the interstitial water, while the lowest pH values are in the vicinity of the former coal pile. The pH values observed in and proximal to AP-B are statistically different from those observed in the FCPA and former coal pile, as shown in **Figure 11**. In contrast, the range of low pH values observed in the FCPA is statistically similar to the range of pH observed at the former coal pile, indicating the observed impacts in the FCPA are attributed to the former coal pile as opposed to AP-B.

Similar to low pH, high sulfate concentrations in groundwater are a defining characteristic in the FCPA relative to other locations downgradient of AP-B, as well as AP-C and AP-D (**Figure 12**). **Figure 12** generally indicates that concentrations of sulfate downgradient of AP-BCD are below 500 mg/L. Whereas, in the FCPA, concentrations of sulfate are observed up to 2,550 mg/L in PZ-64I, based on the August 2023 groundwater data (**Table 1**). The spatial distribution of sulfate concentrations suggests that higher levels of sulfate are observed directly downgradient of the former coal pile and are likely associated with impacts from the former coal pile as opposed to AP-B. Coal often

contains sulfide minerals, which can be oxidized due to infiltration of precipitation or dust suppression water, resulting in increased sulfate, lower pH in groundwater, and mobilization of metalloids and trace elements (as observed in FCPA wells) (Cook and Fritz, 2002, Cravotta, 2008, Gammons, 2010, Nordstrom and Alpers, 1999).

2.4 Stable Isotopes of Sulfate Indicate a Pyrite Oxidation Signature in the FCPA

As discussed in Section 2.3, the FCPA is characterized by high sulfate concentrations (up to 2,550 mg/L). To evaluate the source of sulfate in groundwater, a stable isotopic evaluation was performed for sulfur ($\delta^{34}\text{S}$) and oxygen ($\delta^{18}\text{O}$) from sulfate. Stable isotope analysis is based on the preferential fractionation that occurs with stable isotopes under specific climatic conditions (Peterson and Fry, 1987). The ratio of heavy to light isotopes can be used to evaluate the potential origin of a constituent. Because sulfate (SO_4) was identified as a key parameter that distinguishes the FCPA wells from the other areas near AP-B, the stable isotopes of sulfur and oxygen in groundwater were analyzed to evaluate the sources of sulfate in the target area of interest.

Key potential sources of sulfate at the Site include the following:

- sulfate from CCR (coal combustion);
- sulfate from the oxidation of pyrite in coal;
- sulfate from the oxidation of pyrite in native soils; and
- weathering or evaporation of sulfur containing minerals.

Sulfate generated from a combustion source (e.g., from CCR) is typically characterized by higher $\delta^{18}\text{O}$ (heavier isotopic signature) due to the influence from atmospheric oxygen. In contrast, sulfate generated from an oxidation source (e.g., oxidation of pyrite in coal) is typically characterized by lower $\delta^{18}\text{O}$ (lighter isotopic signature) due to the influence of oxygen from precipitation or groundwater. Weathering or evaporation that result in sulfate reduction are commonly important and often shift $\delta^{34}\text{S}$ to more positive (heavier isotopic signature) values. Stable isotopes were evaluated to see if the signatures indicated a difference between pyrite oxidation from coal and coal combustion (CCR). Details regarding this analysis are provided in **Appendix E**.

In June 2023, groundwater, surface water, and interstitial water samples were collected at the following sample locations for analysis of stable isotopes of sulfur and oxygen:

- AP-BCD Locations
 - BRGWA-23S, BRGWC-47, BRGWC-45, PZ-44, BRGWC-25I, and BRGWC-52I
- Locations Downgradient of the FCPA
 - PZ-58I, PZ-59I, PZ-60I, PZ-63I, PZ-65I, PZ-66I, and BRGWC-50
- AP-B Interstitial Water or Surface Water Locations
 - SW-B-1, DWB-1, and IW-B-1

Sample locations are shown on **Figure 13**; results of the analysis are illustrated on **Figure 14**.

The stable isotope results reveal that samples from the FCPA have a unique isotopic composition driven by sulfate derived from pyrite oxidation (i.e., lower $\delta^{18}\text{O}$ consistent with a former coal pile signature) with low weathering/evaporation (i.e., low $\delta^{34}\text{S}$). Other Site-wide samples had an isotopic composition more representative of sulfate reduction (i.e., combustion or weathering processes) relative to the FCPA. These results suggest that the source of sulfate in the FCPA is the former coal pile and further corroborates that the beryllium, cadmium, cobalt, and lithium observed in the FCPA are derived from the former coal pile and not from a release from AP-B.

3. ALTERNATIVE MONITORING STRATEGY FOR AP-B

This ASD demonstrates that the geochemical signature in groundwater monitoring wells in the FCPA is (i) a distinct and separate signature (primarily low pH and high sulfate) from monitoring wells at AP-BCD and (ii) originates from the former coal pile. Data from multiple years of monitoring at the FCPA and across AP-BCD demonstrates that SSLs of beryllium, cadmium, cobalt, and lithium east of AP-B are derived from a source other than CCR. A revised monitoring strategy is necessary to meet the groundwater monitoring performance standards of the CCR Rule, specifically monitoring wells and piezometers in the FCPA are recommended to be removed from the monitoring network since they do not “accurately represent the quality of groundwater passing the waste boundary of the CCR unit.” In addition to the proposed removal of monitoring wells and piezometers from the current detection and assessment network, Georgia Power recommends including PZ-44 in the AP-B detection monitoring network. Georgia Power also recommends continued groundwater monitoring and corrective action, if warranted, in the FCPA to be regulated by an alternate program of GA EPD since the impacts are from a source other than the CCR unit.

4. CONCLUSIONS

The following lines of evidence support the conclusion that the SSLs of beryllium, cadmium, cobalt, and lithium identified in PZ-51I, PZ-58I, PZ-60I, PZ-61I, and BRGWC-50 along with other monitoring wells and piezometers of the FCPA are not consistent with an impact from AP-B but rather attributed to impacts from the former coal pile:

- Former Coal Pile Investigation:
 - Under certain, site-specific conditions at Plant Branch, groundwater was likely impacted by former coal pile contact water, which has the potential to contain trace elements and be characterized by a low pH generated through the oxidation of coal on the ground surface.
 - In 2018, a Site investigation completed within and east of the former coal pile as part of Plant Branch decommissioning efforts identified arsenic and cadmium in groundwater at elevated concentrations (above the HSRA NCs) and attributed the former coal pile as the source for these constituents in groundwater (GPC, 2018).
- AP-B Interstitial Water Versus FCPA Groundwater:
 - The concentration and distribution of SSL constituents in interstitial water samples. For example, cadmium and cobalt are non-detect or detected at trace levels below the GWPS in recent piezometers (IW-B-3, IW-B-4, and IW-B-5) installed within the CCR in AP-B. This indicates that interstitial water is not the source of these constituents observed in groundwater wells in the FCPA.
 - SSL constituent groundwater concentrations observed in the FCPA are higher than those observed in and downgradient of AP-B (with the highest concentrations in FCPA piezometers observed at the greatest distance from AP-B), which confirms the lack of groundwater concentration gradient for SSL constituents from AP-B to the FCPA wells.
 - Boron, an Appendix III constituent and CCR tracer, concentrations are observed to be the lowest in the FCPA relative to other locations

downgradient of AP-BCD. In addition, statistical evidence (evaluated by histograms) confirms different groundwater signatures in the FCPA relative to within and downgradient of AP-B.

- A refined flow regime analysis within the FCPA and areas downgradient of AP-B suggests that the observed exceedances of SSL constituents are predominantly hydraulically downgradient of and the result of impacts from the former coal pile.
- Groundwater Geochemistry:
 - The analytical data and geochemical signature (primarily low pH and high sulfate) of wells in the FCPA are inconsistent with conditions within and downgradient of AP-B.
 - Stable oxygen and sulfur isotopes of sulfate indicate that the source of sulfate in the FCPA is from pyrite oxidation of coal rather than pyrite combustion (i.e., sulfate released from CCR). This further supports that the impacts in the FCPA are the result of the former coal pile as opposed to AP-B.

During GA EPD's review of this ASD, detection and assessment monitoring wells in the FCPA will continue to be sampled as part of the ongoing assessment monitoring program for AP-BCD. Georgia Power will work with GA EPD to regulate elevated concentrations related to the former coal pile outside of the CCR regulations since the impacts are from a source other than the CCR unit.

Notes:

- = Parameter was not analyzed
- < = Indicates the parameter was not detected above the analytical method detection limit (MDL).
- J = Indicates the parameter was estimated and detected between the MDL and the reporting limit (RL).
- TDS = total dissolved solids
- U = Indicates the parameter was not detected above the analytical minimum detectable concentration (MDC) (Specific to combined radium 226/228)
- Appendix III/IV parameter per 40 CFR 257 Subpart D. Parameters are reported in units of milligrams per liter (mg/L), except for pH reported as s.u. (standard units) and combined radium reported as picocuries per liter (pCi/L).
- Metals were analyzed by EPA Method 6010D, 6020B, and 7470A, anions were analyzed by EPA Method 300.0, TDS was analyzed by SM2540-2011, and combined radium 226/228 by EPA Methods 9315/9320.
- The pH value presented was recorded at the time of sample collection in the field.

Notes:

- All results are reported in milligram of constituent per kilogram of total sample mass
- ND = compound not detected
- SEP = sequential extraction procedure
- J = Results are less than the reporting/requested limit (RL) but greater than or equal to the method detection limit (MDL) and the concentration is an approximate value
- B = Compound was not found in the blank and sample
- * = Lab control sample and Lab control sample duplicate are outside acceptance limits and high biased
- L = Negative instrument reading had an absolute value greater than the reporting limit
- Fe = iron
- Mn = manganese
- FT BGS = feet below ground surface
- NS - not analyzed

Beryllium	mg/L	NS	NS	< 0.00007 U	NS	NS	NS	NS	NS
Cadmium	mg/L	0.0002 J	< 0.0003 U	0.00012 J	< 0.0001 U	< 0.0003 U	NS	NS	NS
Cobalt	mg/L	0.003 J	0.00123	< 0.0003 U	< 0.0004 U	< 0.0003 U	< 0.0003 U	0.00586	0.000852 J
Lithium	mg/L	NS	NS	0.29	NS	NS	NS	NS	NS
Field Parameters									
Dissolved Oxygen (DO)	mg/L	0.54	0.08	0.06	0.09	0.01	0.17	0.12	0.16
Oxidation Reduction Potential (ORP)	mV	24.4	8.34	-191.7	-182	-91.88	81.82	70.89	29.14
pH	SU	6.86	7.32	7.31	7.15	6.53	8.40	5.79	5.81
Specific Conductance	µS/cm	790.5	943.06	1,253.60	1,464.95	1,507.67	828.84	610.65	227.31
Temperature	deg C	18.83	18.62	22.81	18.1	17.48	21.34	23.11	21.06
Turbidity	NTU	4.66	4.4	3.77	4.62	4.61	4.29	0.7	4

Notes:

1. < = for compounds not detected, the associated value is the method detection limit
2. J = Indicates the parameter was estimated and detected between the method detection limit (MDL) and the reporting limit (RL)
3. mg/L = milligrams per liter
4. mV = millivolts
5. deg C = degrees celsius
6. NTU = Nephelometric Turbidity Units
7. SU = Standard Unit
8. µS/cm = microsiemens per centimeter
9. NS = not sampled

RE: Release Notification
Georgia Power Plant Branch
1100 Milledgeville Road
Milledgeville, Putnam County
Tax Parcel 086-002

Dear Mr. Mitchell:

Pursuant to the Rules for Hazardous Site Response, specifically Rule 391-3-19-.05(1) "Listing on the Hazardous Site Inventory", the Environmental Protection Division (EPD) has evaluated the above referenced property to determine whether a release exceeding a reportable quantity has occurred.

Based upon the information available to EPD at the time this evaluation was done, including the release notification that was submitted on March 20, 2018, EPD has no reason to believe that a release exceeding a reportable quantity has occurred at this property. The property was evaluated as being inaccessible, non-residential use, with the nearest downgradient drinking water well greater than 3 miles distant. Enclosed is a copy of our inspection report, recommendation memorandum, and Reportable Quantities Screening Method (RQSM) score sheet that summarize the conditions used to evaluate this property. Based on this information, this property will not be listed on the Hazardous Site Inventory.

As provided for in Section 391-3-19-.04(4) of the Rules, the owner of the property must notify EPD if they become aware of any information not provided in the notification that should have been provided, or if they become aware of any information or events that suggest changes may have occurred in any of the conditions referenced in the attached documents. Please provide a copy of this letter and the attached documents to any person to which title or an interest in this property is transferred.

Please direct questions regarding this matter to Bill Williams of the Response and Remediation Program at 404-232-1502.

Sincerely,

David Brownlee
Unit Coordinator
Response and Remediation Program

ENVIRONMENTAL PROTECTION DIVISION

November 15, 2018

MEMORANDUM

TO: David Brownlee
FROM: Bill Williams
SUBJECT: Non-HSI Recommendation
Georgia Power - Plant Branch
1100 Milledgeville Road
Milledgeville, Putnam County

Background

The Response and Remediation Program received a Release Notification/Reporting Form for the subject property on March 20, 2018. The subject property is a former coal-fired steam generating power plant that was retired is currently undergoing a complete decommissioning. An electrical substation will be the only remaining operation at this property. The notification indicated a release to groundwater of arsenic and cadmium above the Maximum Contaminant Level (MCL). One groundwater sample (MW-C2-02) also found lead at 35.3 µg/L, which is greater than the MCL; However, the consultant attributed the lead contamination to a petroleum release. Soil samples collected in the area of a former skeet range found benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, chrysene, and arsenic at levels exceeding the Appendix I Notification Concentrations (NCs). This release is considered to be a separate release from the one that originally resulted in the property being listed as Site #10051 on the Hazardous Site Inventory (HSI).

A site visit was performed to verify current conditions and perform a limited target survey. See the attached Trip Report (11-15-2018) for details. The site visit found the property is completely fenced and staffed with onsite 24-hour guard service. The nearest residents were found at the North River condominiums, which are approximately 1200 feet from the area of the former power plant and more than 6000 feet from the area of the skeet range. The area of soil contamination is within the secured fenced area. The area of groundwater contamination is on the shore of Lake Sinclair and the flow gradient is directly into the lake. There are no down gradient drinking water wells due to the immediate groundwater intercept provided by Lake Sinclair.

Groundwater Pathway

The subject property was scored for a known release of arsenic to groundwater at concentrations above the MCL. No human exposure is suspected. The quantity of the release is unknown and there were no drinking water wells identified within 3-miles downgradient of the subject property. The groundwater pathway score of 8.1 does not exceed the threshold value of 10.0.

On-Site Exposure

The subject property was scored for a known release of arsenic to the soils. A cover value of 5 was assigned. The site is inaccessible due to the security fencing and guard service. The nearest resident individual is located between 1001 and 3000 feet from the subject property. The on-site pathway score of 0.0 does not exceed the threshold value of 20.0

Recommendation:

The groundwater pathway score is 8.1, and the on-site exposure pathway score is 0.0; Therefore, I recommend the subject property not be listed on the HSI.

TRIP REPORT

November 15, 2018

SITE NAME AND LOCATION: Georgia Power Company-Plant Branch
1100 Milledgeville Road
Milledgeville

COUNTY: Putnam

TRIP BY: Bill Williams, 
Environmental Engineer, RRP

DATE OF INVESTIGATION: November 14, 2018

OFFICIALS CONTACTED: Brad Filipovich - Georgia Power
Regina Linch - Georgia Power
Brian Steele – Resolute Environmental

COMMENTS:

I. Background

The Response and Remediation Program received a Release Notification report for the above referenced property on March 20, 2018. The notification indicated a release to soils of benzo(a)pyrene, benzo(a)anthracene, benzo(b)fluoranthene, chrysene, and arsenic at levels exceeding the Appendix I Notification Concentrations (NCs). The notification also indicated a release to groundwater of arsenic and cadmium above NCs. Lead was also detected above NC in groundwater, but they attempt to attribute the lead to a petroleum release. The subject property is the location of Georgia Power's Plant Branch, a former coal-fired steam electrical generating plant. The coal fired units were retired in 2015 and the plant is currently undergoing a complete decommissioning. An electrical substation will be the only remaining operation at the property when decommissioning is complete.

The soil contamination was found in an area that was previously used as a skeet range and the PAHs are being attributed to leaching from fragments of clay pigeons, which used tar pitch as a binder. The arsenic contamination is attributed to historic fill material. Groundwater contamination is being attributed to former coal storage and maintenance operations.

The subject property was previously listed on the Hazardous Site Inventory (HSI), but was de-listed in 2002. The site was able to certify soil and groundwater for residential risk reduction standards in 2002. It appears these newly detected areas of contamination are not associated with the previous HSI site listing and will be evaluated as new releases.

II. Findings

The site is completely fenced and has active security in the form of 24-hour onsite guards and video surveillance. The area of the former skeet range is well within the property line and the nearest resident was located more than 6000 feet from the skeet range area. The notification indicated they were between 1001 and 3000 feet at the River North condominiums. It is assumed that was measured from the Plant

Georgia Power-Plant Branch Notification

November 15, 2018

Page 2 of 2

entrance. During the site visit, the consultant for Georgia Power indicated that the areas of soil contamination will be remediated sometime during 2019.

The groundwater wells were visibly confirmed and it was evident that area of groundwater contamination is near the shore of Lake Sinclair. The groundwater flow gradient is steep and directly toward Lake Sinclair, which would act a complete groundwater intercept. There is at least 3000 linear feet of surface water between the location of the groundwater release and any downgradient land that could possibly have a drinking water well. Due to the proximity to Lake Sinclair, a drinking water well survey was not performed and there are no downgradient drinking water wells within 3-miles.

RECOMMENDATIONS/FOLLOW-UP: Evaluate the subject property using the RQSM.

Re: Branch CCR Groundwater Compliance Upgradient
 Work Order: 634447

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 23, 2023. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Samples "BRA-BRGWA-2S" "BRA-BRGWA-6S" "BRA-BRAW-5I" and "BRA-BRGWA-2I" did not hold sulfide preservation. 634447001(BRA-BRGWA-2S), 634447003(BRA-BRGWA-5I), 634447004(BRA-BRGWA-6S), 634447005(BRA-BRGWA-2I). The laboratory received the following sample(s):

<u>Laboratory ID</u>	<u>Client ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Recieved</u>
634447001	BRA-BRGWA-2S	Ground Water	22/08/23 10:06	23/08/23 13:00
634447002	BRA-BRGWA-5S	Ground Water	22/08/23 10:05	23/08/23 13:00
634447003	BRA-BRGWA-5I	Ground Water	22/08/23 10:10	23/08/23 13:00
634447004	BRA-BRGWA-6S	Ground Water	22/08/23 10:15	23/08/23 13:00
634447005	BRA-BRGWA-2I	Ground Water	22/08/23 10:12	23/08/23 13:00

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4504.

Sincerely,

Erin Trent
Project Manager

Certificate of Analysis Report for

GPCC001 Georgia Power Company

Client SDG: 634447 GEL Work Order: 634447

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL
- J Value is estimated
- N/A RPD or %Recovery limits do not apply.
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- NI See case narrative
- Y Other specific qualifiers were required to properly define the results. Consult case narrative.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
- B The target analyte was detected in the associated blank.
- e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
- J See case narrative for an explanation

QC Summary

Workorder: 634447

Page 12 of 12

<u>Parmname</u>	<u>NOM</u>	<u>Sample Qual</u>	<u>QC</u>	<u>Units</u>	<u>RPD%</u>	<u>REC%</u>	<u>Range</u>	<u>Anlst</u>	<u>Date</u>	<u>Time</u>
-----------------	------------	--------------------	-----------	--------------	-------------	-------------	--------------	--------------	-------------	-------------

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: Determination of Metals by ICP-MS

Analytical Method: SW846 3005A/6020B

Analytical Procedure: GL-MA-E-014 REV# 36

Analytical Batch: 2482703

Preparation Method: SW846 3005A

Preparation Procedure: GL-MA-E-006 REV# 14

Preparation Batch: 2482702

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
634447001	BRA-BRGWA-2S
634447002	BRA-BRGWA-5S
634447003	BRA-BRGWA-5I
634447004	BRA-BRGWA-6S
634447005	BRA-BRGWA-2I
1205499164	Method Blank (MB) ICP-MS
1205499165	Laboratory Control Sample (LCS)
1205499168	634441003(BRA-BRGWC-34SL) Serial Dilution (SD)
1205499166	634441003(BRA-BRGWC-34SS) Matrix Spike (MS)
1205499167	634441003(BRA-BRGWC-34SSD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Product: Mercury Analysis Using the Perkin Elmer Automated Mercury Analyzer

Analytical Method: SW846 7470A

Analytical Procedure: GL-MA-E-010 REV# 40

Analytical Batch: 2482624

Preparation Method: SW846 7470A Prep

Preparation Procedure: GL-MA-E-010 REV# 40

Preparation Batch: 2482623

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>

1205499047	634447002(BRA-BRGWA-5SS) Matrix Spike (MS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

General Chemistry

Product: Ion Chromatography

Analytical Method: EPA 300.0

Analytical Procedure: GL-GC-E-086 REV# 32

Analytical Batch: 2481608

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
634447001	BRA-BRGWA-2S
634447002	BRA-BRGWA-5S
634447003	BRA-BRGWA-5I
634447004	BRA-BRGWA-6S
634447005	BRA-BRGWA-2I
1205497368	Method Blank (MB)
1205497369	Laboratory Control Sample (LCS)
1205497371	634145003(NonSDG) Sample Duplicate (DUP)
1205497373	634145003(NonSDG) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions

The following samples 1205497371 (Non SDG 634145003DUP) and 1205497373 (Non SDG 634145003PS) were diluted because target analyte concentrations exceeded the calibration range. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Product: Solids, Total Dissolved**Analytical Method:** SM 2540C**Analytical Procedure:** GL-GC-E-001 REV# 21**Analytical Batch:** 2482655

Suspected Hazard Information

A) Shipped as a DOT Hazardous?	Yes	No	Hazard Class Shipped: UN#: If UN2910, Is the Radioactive Shipment Survey Compliant? Yes ___ No ___
B) Did the client designate the samples are to be received as radioactive?	Yes	No	COC notation or radioactive stickers on containers equal client designation.
C) Did the RSO classify the samples as radioactive?	Yes	No	Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 0 CPM/mR/Hr Classified as: Rad 1 Rad 2 Rad 3
D) Did the client designate samples are hazardous?	Yes	No	COC notation or hazard labels on containers equal client designation.
E) Did the RSO identify possible hazards?	Yes	No	If D or E is yes, select Hazards below. PCB's Flammable Foreign Soil RCRA Asbestos Beryllium Other:

Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1 Shipping containers received intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2 Chain of custody documents included with shipment?	✓			Circle Applicable: Client contacted and provided COC COC created upon receipt
3 Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	✓			Preservation Method: Wet Ice Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: _____
4 Daily check performed and passed on IR temperature gun?	✓			Temperature Device Serial #: IR2-21 Secondary Temperature Device Serial # (If Applicable):
5 Sample containers intact and sealed?	✓			Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6 Samples requiring chemical preservation at proper pH?				Sample ID's and Containers Affected: MOA-P2-G11, BRA-BREWA-S1, BRA-BREWA-23S,
7 Do any samples require Volatile Analysis?	✓			If Yes, are Encores or Soil Kits present for solids? Yes ___ No ___ NA ___ (If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes ___ No ___ NA ___ (If unknown, select No) Are liquid VOA vials free of headspace? Yes ___ No ___ NA ___ Sample ID's and containers affected:
8 Samples received within holding time?	✓			ID's and tests affected:
9 Sample ID's on COC match ID's on bottles?	✓			ID's and containers affected:
10 Date & time on COC match date & time on bottles?	✓			Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11 Number of containers received match number indicated on COC?	✓			Circle Applicable: No container count on COC Other (describe)
12 Are sample containers identifiable as GEL provided by use of GEL labels?	✓			
13 COC form is properly signed in relinquished/received sections?	✓			Circle Applicable: Not relinquished Other (describe)

Re: Branch CCR Groundwater Compliance Upgradient-R
Work Order: 634450

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 23, 2023. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

<u>Laboratory ID</u>	<u>Client ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Recieved</u>
634450001	BRA-BRGWA-2S	Ground Water	22/08/23 10:06	23/08/23 13:00
634450002	BRA-BRGWA-5S	Ground Water	22/08/23 10:05	23/08/23 13:00
634450003	BRA-BRGWA-5I	Ground Water	22/08/23 10:10	23/08/23 13:00
634450004	BRA-BRGWA-6S	Ground Water	22/08/23 10:15	23/08/23 13:00
634450005	BRA-BRGWA-2I	Ground Water	22/08/23 10:12	23/08/23 13:00

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report for

GPCC001 Georgia Power Company

Client SDG: 634450 GEL Work Order: 634450

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Georgia Power Company
SDG #: 634450**

Product: Radium-226+Radium-228 Calculation

Analytical Method: Calculation

Analytical Procedure: GL-RAD-D-003 REV# 45

Analytical Batch: 2488604

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
634450001	BRA-BRGWA-2S
634450002	BRA-BRGWA-5S
634450003	BRA-BRGWA-5I
634450004	BRA-BRGWA-6S
634450005	BRA-BRGWA-2I

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Product: GFPC Ra228, Liquid

Analytical Method: EPA 904.0/SW846 9320 Modified

1205520856	634443001(BRA-BRGWC-33S) Sample Duplicate (DUP)
1205520857	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where

applicable, with the following exceptions.

Quality Control (QC) Information

Method Blank Criteria

The blank result (See Below) is greater than the MDC but less than the required detection limit.

Sample	Analyte	Value
1205520855 (MB)	Radium-228	Result: 1.38 pCi/L > MDA: 1.13 pCi/L <= RDL: 3.00 pCi/L

Technical Information

Sample Re-prep/Re-analysis

Samples were re-prepped due to high relative percent difference/relative error ratio. The re-analysis is being reported.

Product: Lucas Cell, Ra226, Liquid

Analytical Method: EPA 903.1 Modified

Analytical Procedure: GL-RAD-A-008 REV# 15

Analytical Batch: 2482017

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>

1205498039	634443001(BRA-BRGWC-33S) Matrix Spike (MS)
1205498040	Laboratory Control Sample (LCS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Miscellaneous Information

Additional Comments

The matrix spike, 1205498039 (BRA-BRGWC-33SMS), aliquot was reduced to conserve sample volume.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Notes:

TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

** Indicates analyte is a surrogate/tracer compound.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Re: Branch CCR Groundwater Compliance APBCD
 Work Orders: 634650,634444 and 634768

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 23, 2023, August 24, 2023 and August 25, 2023. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. Samples "BRA-PZ-51I" "BRA-PZ-60I" "BRA-PZ-58I" "BRA-PZ-63I" "BRA-PZ-64I" "BRA-PZ-68D" "BRA-APBCD-FD-02" "BRA-PZ-50D" "BRA-BRGWC-50" "BRA-PZ-59I" containers for sodium hydroxide/zinc acetate did not hold preservation. Samples were preserved upon receipt and placed on a 24 hour preservation hold. 634650001(BRA-PZ-51I), 634650002(BRA-PZ-58I), 634650003(BRA-PZ-59I), 634650004(BRA-PZ-60I), 634650005(BRA-PZ-63I), 634650006(BRA-PZ-64I), 634650007(BRA-PZ-68D), 634650010(BRA-APBCD-FD-02), 634650011(BRA-BRGWC-50), 634650014(BRA-PZ-50D). The laboratory received the following sample(s):

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4504.

Sincerely,

A handwritten signature in black ink that reads "Amanda Turner". The signature is written in a cursive style with a horizontal line extending from the end of the name.

Amanda Turner for
Erin Trent
Project Manager

Certificate of Analysis Report for

GPCC001 Georgia Power Company

Client SDG: 634650 GEL Work Order: 634650

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- B Either presence of analyte detected in the associated blank, or MDL/IDL < sample value < PQL
- J Value is estimated
- N/A RPD or %Recovery limits do not apply.
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- NI See case narrative
- Y Other specific qualifiers were required to properly define the results. Consult case narrative.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
- B The target analyte was detected in the associated blank.
- e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes
- J See case narrative for an explanation

QC Summary

Workorder: 634768

Page 13 of 13

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- NI See case narrative
- Y Other specific qualifiers were required to properly define the results. Consult case narrative.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.

GEL LABORATORIES LLC

2040 Savage Road Charleston, SC 29407 - (843) 556-8171 - www.gel.com

QC Summary

Workorder: 634650

Page 13 of 13

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
B											
The target analyte was detected in the associated blank.											
e											
5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes											
J											
See case narrative for an explanation											

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Metals

Product: Determination of Metals by ICP-MS

Analytical Method: SW846 3005A/6020B

Analytical Procedure: GL-MA-E-014 REV# 36

Analytical Batch: 2483979

Preparation Method: SW846 3005A

Preparation Procedure: GL-MA-E-006 REV# 14

Preparation Batch: 2483978

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
634768001	BRA-APBCD-FD-03
634768002	BRA-APBCD-EB-05
634768003	BRA-BRGWC-27I

1205501594	634768003(BRA-BRGWC-27ISD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements

The CRDL standard recoveries for SW846 6020B met the advisory control limits with the exception of calcium. Client sample concentrations were less than the MDL or greater than two times the CRDL; therefore the data were not adversely affected. 634768001 (BRA-APBCD-FD-03), 634768002 (BRA-APBCD-EB-05), 634768003 (BRA-BRGWC-27I), 634768004 (BRA-BRGWC-45), 634768005 (BRA-PZ-75I), 634768006 (BRA-PZ-74I), 634768007 (BRA-BRGWC-29I), 634768008 (BRA-PZ-51D), 634768009 (BRA-APBCD-FB-03), 634768011

(BRA-BRGWC-52I), 634768012 (BRA-BRGWC-47) and 634768013 (BRA-BRGWC-25I).

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 634768003 (BRA-BRGWC-27I), 634768005 (BRA-PZ-75I), 634768006 (BRA-PZ-74I), 634768007 (BRA-BRGWC-29I), 634768008 (BRA-PZ-51D), 634768011 (BRA-BRGWC-52I), 634768012 (BRA-BRGWC-47) and 634768013 (BRA-BRGWC-25I) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

Technical Information

Sample Dilutions

The following samples 1205499056 (BRA-PZ-79DUP), 1205499057 (BRA-PZ-79PS), 634650001 (BRA-PZ-51I), 634650002 (BRA-PZ-58I), 634650004 (BRA-PZ-60I) and 634650006 (BRA-PZ-64I) were diluted because target analyte concentrations exceeded the calibration range. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Quality Control (QC) Information

Laboratory Control Sample Duplicate (LCSD)

An LCSD was used in place of matrix QC due to limited sample volume. 634444003 (BRA-BRGWA-23S), 634444004 (BRA-BRGWC-30I), 634444005 (BRA-BRGWC-32S), 634444006 (BRA-PZ-61I) and 634444007 (BRA-APBCD-FB-01).

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Re: Branch CCR Groundwater Compliance APBCD-R
Work Orders: 634781,634446 and 634652

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 23, 2023, August 24, 2023 and August 25, 2023. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt. The laboratory received the following sample(s):

<u>Laboratory ID</u>	<u>Client ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Certificate of Analysis Report for

GPCC001 Georgia Power Company

Client SDG: 634652 GEL Work Order: 634652

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

COOPER-1-2°C COOPER-3-1°C COOPER-5-2°C

Suspected Hazard Information: Yes No
 *If Net Counts > 100cpm on samples not marked "radioactive", contact the Radiation Safety Group for further investigation.
 Hazard Class Shipped: _____ UN#: _____
 If UN2910, Is the Radioactive Shipment Survey Compliant? Yes ___ No ___
 A) Shipped as a DOT Hazardous? Yes No
 B) Did the client designate the samples are to be received as radioactive? Yes No
 C) Did the RSO classify the samples as radioactive? Yes No
 Maximum Net Counts Observed* (Observed Counts - Area Background Counts): 00 CPM/AmR/hr
 Classified as: Rad 1 Rad 2 Rad 3
 D) Did the client designate samples are hazardous? Yes No
 E) Did the RSO identify possible hazards? Yes No
 If D or E is yes, select Hazards below: PCBs Flammable Foreign Soil RCRA Asbestos Beryllium Other: _____

Sample Receipt Criteria	Yes	NA	No	Comments/Qualifiers (Required for Non-Conforming Items)
1 Shipping containers received intact and sealed?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
2 Chain of custody documents included with shipment?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: Client contacted and provided COC COC created upon receipt
3 Samples requiring cold preservation within (0 ≤ 6 deg. C)?*	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Preservation Method: <u>Wet Ice</u> Ice Packs Dry ice None Other: *all temperatures are recorded in Celsius TEMP: _____
4 Daily check performed and passed on IR temperature gun?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Temperature Device Serial #: <u>IR2-21</u> Secondary Temperature Device Serial # (If Applicable): _____
5 Sample containers intact and sealed?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: Seals broken Damaged container Leaking container Other (describe)
6 Samples requiring chemical preservation at proper pH?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Sample ID's and Containers Affected: <u>M02A-D2-G11, BRA-BREW-A-51, BRA-BREW-A-235,</u> If Preservation added, Lot#: _____
7 Do any samples require Volatile Analysis?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	If Yes, are Encores or Soil Kits present for solids? Yes ___ No ___ NA ___ (If yes, take to VOA Freezer) Do liquid VOA vials contain acid preservation? Yes ___ No ___ NA ___ (if unknown, select No) Are liquid VOA vials free of headspace? Yes ___ No ___ NA ___ Sample ID's and containers affected: _____
8 Samples received within holding time?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	ID's and tests affected: _____
9 Sample ID's on COC match ID's on bottles?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	ID's and containers affected: _____
10 Date & time on COC match date & time on bottles?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: No dates on containers No times on containers COC missing info Other (describe)
11 Number of containers received match number indicated on COC?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: No container count on COC Other (describe)
12 Are sample containers identifiable as GEL provided by use of GEL labels?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
13 COC form is properly signed in relinquished/received sections?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Circle Applicable: Not relinquished Other (describe)

Comments (Use Continuation Form if needed):
BRA-D2-13S, BRA-BREW-A-2S, BRA-BREW-A-6S, BRA-BREW-C-32S, BRA-BREW-A-2I, BRA-BREW-C-37S, BRA-BREW-C-34S, BRA-BREW-C-30I Sulfide
Samples didnt hold proper preservation.

Good morning!

I wanted to notify you of the following preservation issues. The samples containers for sodium hydroxide/zinc acetate listed below did not hold preservation. The samples were preserved upon receipt and placed on a 24-hour preservation hold.

"BRA-PZ-51I" "BRA-PZ-60I" "BRA-PZ-58I" "BRA-PZ-63I" "BRA-PZ-64I" "BRA-PZ-68D" "BRA-APBCD-FD-02" "BRA-PZ-50D"
"BRA-BRGWC-50" for work orders 634652 and 634650

"BRA-PZ-59I" for work order 634650

"BRA-BRGWC-35S" "BRA-BRGWC-36S" "BRA-APE-FB-08" "BRA-BRGWC-38S" "BRA-APE-FD-05" for work orders 634648
and 634615

See attachments for reference.

Thank you!
Amanda

Radium-226		1.95	+/-0.714	0.786	+/-0.834	1.00	pCi/L			LXP1	09/21/23	0938	2483037	3

The following Analytical Methods were performed

Method	Description
1	EPA 904.0/SW846 9320 Modified
2	Calculation
3	EPA 903.1 Modified

Surrogate/Tracer Recovery	Test	Batch ID	Recovery%	Acceptable Limits
Barium-133 Tracer	GFPC Ra228, Liquid "As Received"	2483035	81.1	(15%-125%)

Notes:

The MDC is a sample specific MDC.

TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

Column headers are defined as follows:

DF: Dilution Factor

DL: Detection Limit

Lc/LC: Critical Level

MDA: Minimum Detectable Activity

MDC: Minimum Detectable Concentration

Mtd.: Method

PF: Prep Factor

RL: Reporting Limit

TPU: Total Propagated Uncertainty

The following Analytical Methods were performed

Method	Description
1	EPA 904.0/SW846 9320 Modified
2	Calculation
3	EPA 903.1 Modified

Surrogate/Tracer Recovery	Test	Batch ID	Recovery%	Acceptable Limits
Barium-133 Tracer	GFPC Ra228, Liquid "As Received"	2483035	70.5	(15%-125%)

Notes:

The MDC is a sample specific MDC.

TPU and Counting Uncertainty are calculated at the 95% confidence level (1.96-sigma).

Column headers are defined as follows:

DF: Dilution Factor	Mtd.: Method
DL: Detection Limit	PF: Prep Factor
Lc/LC: Critical Level	RL: Reporting Limit
MDA: Minimum Detectable Activity	TPU: Total Propagated Uncertainty
MDC: Minimum Detectable Concentration

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

** Indicates analyte is a surrogate/tracer compound.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Re: Branch CCR Groundwater Compliance APBCD
Work Orders: 591355,590855 and 590845

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on August 24, 2022 and August 29, 2022. This revised data report has been prepared and reviewed in accordance with GEL's standard operating procedures. The data package is being revised to include 6 missing metals.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4504.

Sincerely,

Erin Trent
Project Manager

Purchase Order: GPC82177-0003

**Certificate of Analysis Report
for**

GPCC001 Georgia Power Company

Client SDG: 591355 GEL Work Order: 591355

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- J See case narrative for an explanation
- J Value is estimated
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Notes:

The Qualifiers in this report are defined as follows:

- < Result is less than value reported
- > Result is greater than value reported
- B The target analyte was detected in the associated blank.
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- H Analytical holding time was exceeded
- J See case narrative for an explanation

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where the duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- < Result is less than value reported
- > Result is greater than value reported
- B The target analyte was detected in the associated blank.
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- H Analytical holding time was exceeded
- J See case narrative for an explanation
- J Value is estimated
- N Metals--The Matrix spike sample recovery is not within specified control limits
- N/A RPD or %Recovery limits do not apply.
- N1 See case narrative
- ND Analyte concentration is not detected above the detection limit
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
- R Sample results are rejected
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

QC Summary

Workorder: 590855

Page 11 of 11

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
X											
Y											
Z											
^											
d											
e											
h											

X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.

^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.

d 5-day BOD--The 2:1 depletion requirement was not met for this sample

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

h Preparation or preservation holding time was exceeded

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where the duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- < Result is less than value reported
- > Result is greater than value reported
- B The target analyte was detected in the associated blank.
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed invalid for reporting to regulatory agencies
- H Analytical holding time was exceeded
- J See case narrative for an explanation
- J Value is estimated
- N Metals--The Matrix spike sample recovery is not within specified control limits
- N/A RPD or %Recovery limits do not apply.
- N1 See case narrative
- ND Analyte concentration is not detected above the detection limit
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- R Per section 9.3.4.1 of Method 1664 Revision B, due to matrix spike recovery issues, this result may not be reported or used for regulatory compliance purposes.
- R Sample results are rejected
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier

QC Summary

Workorder: 590845

Page 11 of 11

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
Y											
Z											
^											
d											
e											
h											

Y Other specific qualifiers were required to properly define the results. Consult case narrative.

Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.

^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.

d 5-day BOD--The 2:1 depletion requirement was not met for this sample

e 5-day BOD--Test replicates show more than 30% difference between high and low values. The data is qualified per the method and can be used for reporting purposes

h Preparation or preservation holding time was exceeded

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where the duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

1205178582	591351001(BRGWC-17SSD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements

The CRDL standard recoveries for SW846 6020A/6020B met the advisory control limits with the exception of calcium. Client sample concentrations were less than the MDL or greater than two times the CRDL; therefore the data were not adversely affected. 591355014 (PZ-51S), 591355015 (FD-02), 591355017 (EB-06), 591355021 (FB-03), 591355022 (PZ-63I), 591355024 (BRGWC-32S), 591355025 (EB-07) and 591355026 (BRGWC-52I).

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 591355012 (PZ-51D), 591355013 (PZ-61I), 591355016 (PZ-50D), 591355018 (PZ-62I), 591355019 (PZ-59I), 591355020 (BRGWC-27I), 591355022 (PZ-63I), 591355023 (PZ-57I), 591355024 (BRGWC-32S) and 591355026 (BRGWC-52I) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument. Per the SOP, sample 591355019 (PZ-59I) was diluted due to internal standard recoveries outside the acceptable control limits.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement

The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike also did not meet the required control limits; thus, confirming matrix interferences and/or sample non-homogeneity.

Sample	Analyte	Value
1205178779 (PZ-58IMS)	Mercury	57.7* (75%-125%)

Post Spike (PS) Recovery Statement

The percent recoveries (%R) obtained from the PS analyses are evaluated when the sample concentration is less

than four times (4X) the spike concentration added. The PS did not meet the recommended quality control acceptance criteria for percent recoveries for all applicable analytes and verifies the presence of matrix interferences.

Sample	Analyte	Value
1205178781 (PZ-58IPS)	Mercury	54.6* (80%-120%)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions

The following samples 1205179260 (BRGWC-17SDUP), 1205179261 (BRGWC-17SPS), 591355001 (FD-01), 591355002 (PZ-58I) and 591355003 (PZ-60I) were diluted because target analyte concentrations exceeded the calibration range. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

1205182314	590838001(BRGWA-2SPS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement

The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike recovery was within the required control limits. This verifies the absence of a matrix interference in the post-spike digested sample. The recovery may be attributed to possible sample matrix interference and/or

non-homogeneity.

Sample	Analyte	Value
1205174767 (BRGWA-2SMS)	Magnesium	127* (75%-125%)

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample 590855004 (BRGWC-25I) was diluted to ensure that the analyte concentration was within the linear calibration range of the instrument.

1205175106	590719007(NonSDGPS) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS/MSD) Recovery Statement

The percent recoveries (%R) obtained from the MS/MSD analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS/MSD (See Below) did not meet the recommended quality control acceptance criteria for percent recoveries for the following applicable analyte. The post spike also did not meet the required control limits; thus, confirming matrix interferences and/or sample non-homogeneity.

Sample	Analyte	Value
1205175104 (Non SDG 590719007MS)	Mercury	73.9* (75%-125%)

Post Spike (PS) Recovery Statement

The percent recoveries (%R) obtained from the PS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The PS did not meet the recommended quality control acceptance criteria for percent recoveries for all applicable analytes and verifies the presence of matrix interferences.

Sample	Analyte	Value
1205175106 (Non SDG 590719007PS)	Mercury	73.5* (80%-120%)

Analytical Batch: 2308555

Preparation Method: SW846 7470A Prep

Preparation Procedure: GL-MA-E-010 REV# 38

Preparation Batch: 2308553

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
590845001	BRGWA-23S
590845002	BRGWC-47
590845003	EB-05
1205175116	Method Blank (MB)CVAA
1205175117	Laboratory Control Sample (LCS)
1205175120	589727024(NonSDGL) Serial Dilution (SD)
1205175118	589727024(NonSDGD) Sample Duplicate (DUP)
1205175119	589727024(NonSDGS) Matrix Spike (MS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

General Chemistry

Product: Ion Chromatography

Analytical Method: EPA 300.0

Analytical Procedure: GL-GC-E-086 REV# 30

Analytical Batch: 2308691

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
590845001	BRGWA-23S
590845002	BRGWC-47
590845003	EB-05
1205175343	Method Blank (MB)
1205175344	Laboratory Control Sample (LCS)
1205175345	590838001(BRGWA-2S) Sample Duplicate (DUP)
1205175346	590838001(BRGWA-2S) Post Spike (PS)
1205175347	590857001(BRGWC-33S) Sample Duplicate (DUP)
1205175348	590857001(BRGWC-33S) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement

The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Sulfate	1205175346 (BRGWA-2SPS)	111* (90%-110%)

Technical Information

Sample Dilutions

The following samples 1205175347 (BRGWC-33SDUP), 1205175348 (BRGWC-33SPS), 590845001 (BRGWA-23S) and 590845002 (BRGWC-47) were diluted because target analyte concentrations exceeded the calibration range. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	590845	
	001	002
Sulfate	2X	200X

Product: Solids, Total Dissolved

Analytical Method: SM 2540C

Analytical Procedure: GL-GC-E-001 REV# 19

Analytical Batch: 2309029

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
590845001	BRGWA-23S
590845002	BRGWC-47
590845003	EB-05
1205176098	Method Blank (MB)
1205176099	Laboratory Control Sample (LCS)
1205176100	590857001(BRGWC-33S) Sample Duplicate (DUP)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Product: Alkalinity

Analytical Method: SM 2320B

Analytical Procedure: GL-GC-E-033 REV# 14

Analytical Batch: 2309339

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
590845001	BRGWA-23S
590845002	BRGWC-47
590845003	EB-05
1205176798	Laboratory Control Sample (LCS)
1205176799	590838001(BRGWA-2S) Sample Duplicate (DUP)
1205176800	590838001(BRGWA-2S) Matrix Spike (MS)
1205176801	590857001(BRGWC-33S) Sample Duplicate (DUP)
1205176802	590857001(BRGWC-33S) Matrix Spike (MS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Re: Branch CCR Groundwater Compliance APBCD
Work Orders: 609212,608413,608602,608803 and 608969

Dear Joju Abraham:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on January 25, 2023, January 26, 2023, January 27, 2023, January 31, 2023 and February 02, 2023. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

The samples were delivered with proper chain of custody documentation and signatures. All sample containers arrived without any visible signs of tampering or breakage. There are no additional comments concerning sample receipt.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4504.

Sincerely,

Erin Trent
Project Manager

Certificate of Analysis Report for

GPCC001 Georgia Power Company

Client SDG: 608602 GEL Work Order: 608602

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a Tracer compound
- ** Analyte is a surrogate compound
- J Value is estimated
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

The designation ND, if present, appears in the result column when the analyte concentration is not detected above the limit as defined in the 'U' qualifier above.

This data report has been prepared and reviewed in accordance with GEL Laboratories LLC standard operating procedures. Please direct any questions to your Project Manager, Erin Trent.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

* Indicates that a Quality Control parameter was not within specifications.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Notes:

The Qualifiers in this report are defined as follows:

- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- J Value is estimated
- X Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- N Metals--The Matrix spike sample recovery is not within specified control limits
- H Analytical holding time was exceeded
- < Result is less than value reported
- > Result is greater than value reported
- h Preparation or preservation holding time was exceeded
- R Sample results are rejected
- Z Paint Filter Test--Particulates passed through the filter, however no free liquids were observed.
- d 5-day BOD--The 2:1 depletion requirement was not met for this sample
- ^ RPD of sample and duplicate evaluated using +/-RL. Concentrations are <5X the RL. Qualifier Not Applicable for Radiochemistry.
- N/A RPD or %Recovery limits do not apply.
- ND Analyte concentration is not detected above the detection limit
- E %difference of sample and SD is >10%. Sample concentration must meet flagging criteria
- NJ Consult Case Narrative, Data Summary package, or Project Manager concerning this qualifier
- E General Chemistry--Concentration of the target analyte exceeds the instrument calibration range
- Q One or more quality control criteria have not been met. Refer to the applicable narrative or DER.
- FB Mercury was found present at quantifiable concentrations in field blanks received with these samples. Data associated with the blank are deemed

QC Summary

Workorder: 608413

Page 11 of 11

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more or %RPD not applicable.
^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.
* Indicates that a Quality Control parameter was not within specifications.
For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

1205304630	608410001(BRA-BRGWA-2SS) Matrix Spike (MS)
1205304631	608410001(BRA-BRGWA-2SSD) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Sample 608413004 (BRA-BRGWC-32S) was diluted to ensure that the analyte concentration was within the linear calibration range of the instrument.

Analyte	608413 004
Boron	10X

Product: Mercury Analysis Using the Perkin Elmer Automated Mercury Analyzer

 1205304360 608413001(BRA-BRGWA-12S) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Technical Information

Sample Dilutions

The following sample 608413004 (BRA-BRGWC-32S) was diluted because target analyte concentrations exceeded the calibration range. The following samples 1205304359 (BRA-BRGWA-12SDUP), 1205304360 (BRA-BRGWA-12SPS), 608413001 (BRA-BRGWA-12S), 608413002 (BRA-BRGWA-12I), 608413003 (BRA-BRGWA-23S) and 608413004 (BRA-BRGWC-32S) in this sample group were diluted due to matrix interference. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	608413			
	001	002	003	004
Nitrate-N	5X	2X	2X	2X
Sulfate	1X	1X	1X	20X

Miscellaneous Information

Manual Integrations

Samples 608413002 (BRA-BRGWA-12I), 608413003 (BRA-BRGWA-23S) and 608413004 (BRA-BRGWC-32S) were manually integrated to correctly position the baseline as set in the calibration standards.

Product: Solids, Total Dissolved

Analytical Method: SM 2540C

Analytical Procedure: GL-GC-E-001 REV# 20

Analytical Batch: 2376170

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
608413001	BRA-BRGWA-12S

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CRDL/PQL Requirements

The CRDL standard recoveries for SW846 6020A/6020B met the advisory control limits with the exception of boron. Client sample concentrations were less than the MDL or greater than two times the CRDL; therefore the data were not adversely affected. 608602001 (BRA-PZ-44), 608602002 (BRA-APBCD-FD-01), 608602003 (BRA-BRGWC-45), 608602004 (BRA-APBCD-EB-04), 608602005 (BRA-APBCD-FB-01), 608602006 (BRA-BRGWC-50), 608602007 (BRA-BRGWC-52I) and 608602008 (BRA-BRGWC-27I).

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities

indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 608602001 (BRA-PZ-44), 608602006 (BRA-BRGWC-50), 608602007 (BRA-BRGWC-52I) and 608602008 (BRA-BRGWC-27I) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Quality Control (QC) Information

Serial Dilution % Difference Statement

The serial dilution is used to assess matrix suppression or enhancement. Raw element concentrations 25x the

IDL/MDL for CVAA, 50X the IDL/MDL for ICP and 100X the IDL/MDL for ICP-MS analyses are applicable for serial dilution assessment. Not all the applicable analytes were within the established acceptance criteria. Matrix suppression may be suspected. The data has been qualified.

Sample	Analyte	Value
1205308097 (BRA-PZ-66ISDILT)	Calcium	24.4 *(0%-20%)
	Magnesium	22.5 *(0%-20%)
	Sodium	25.2 *(0%-20%)

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples 608969001 (BRA-PZ-66I), 608969004 (BRA-PZ-57I), 608969005 (BRA-APBCD-FD03), 608969006 (BRA-PZ-63I), 608969007 (BRA-PZ-62I), 608969008 (BRA-PZ-51S) and 608969009 (BRA-PZ-64I) were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

ICSA/ICSAB Statement

For the ICP-MS analysis, the ICSA solution contains analyte concentrations which are verified trace impurities indigenous to the purchased standard.

Technical Information

Sample Dilutions

Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range. Samples were diluted to ensure that the analyte concentrations were within the linear calibration range of the instrument.

Analyte	609212	
	001	002
Boron	5X	10X

Calcium	5X	10X
---------	----	-----

Product: Mercury Analysis Using the Perkin Elmer Automated Mercury Analyzer

Analytical Method: SW846 7470A

Analytical Procedure: GL-MA-E-010 REV# 39

Analytical Batch: 2378878

Preparation Method: SW846 7470A Prep

Preparation Procedure: GL-MA-E-010 REV# 39

Preparation Batch: 2378875

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
609212001	BRA-PZ-68D
609212002	BRA-PZ-69I
1205312141	Method Blank (MB)CVAA
1205312142	Laboratory Control Sample (LCS)
1205312145	609438010(NonSDGL) Serial Dilution (SD)
1205312143	609438010(NonSDGD) Sample Duplicate (DUP)
1205312144	609438010(NonSDGS) Matrix Spike (MS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

There are no exceptions, anomalies or deviations from the specified methods. All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable.

General Chemistry

Product: Ion Chromatography

Analytical Method: EPA 300.0

Analytical Procedure: GL-GC-E-086 REV# 30

Analytical Batch: 2377739

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>
609212001	BRA-PZ-68D
609212002	BRA-PZ-69I
1205310453	Method Blank (MB)

1205310456	609211001(BRA-IW-B-1) Post Spike (PS)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Quality Control (QC) Information

Matrix Spike (MS)/Post Spike (PS) Recovery Statement

The percent recoveries (%R) obtained from the spike analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The matrix spike recovered outside of the established acceptance limits due to matrix interference and/or non-homogeneity.

Analyte	Sample	Value
Chloride	1205310456 (BRA-IW-B-1PS)	114* (90%-110%)

Technical Information

Sample Dilutions

The following samples 1205310455 (BRA-IW-B-1DUP), 1205310456 (BRA-IW-B-1PS), 609212001 (BRA-PZ-68D) and 609212002 (BRA-PZ-69I) were diluted because target analyte concentrations exceeded the calibration range. The following samples 1205310455 (BRA-IW-B-1DUP) and 1205310456 (BRA-IW-B-1PS) in this sample group were diluted due to matrix interference. Dilutions may be required for many reasons, including to minimize matrix interferences or to bring over range target analyte concentrations into the linear calibration range.

Analyte	609212	
	001	002
Chloride	20X	1X
Sulfate	20X	20X

Product: Solids, Total Dissolved

Analytical Method: SM 2540C

Analytical Procedure: GL-GC-E-001 REV# 20

Analytical Batch: 2379677

The following samples were analyzed using the above methods and analytical procedure(s).

<u>GEL Sample ID#</u>	<u>Client Sample Identification</u>

RE: Project: BRANCH AP-BCD
Pace Project No.: 92585977

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between February 03, 2022 and February 04, 2022. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA
- Pace Analytical Services - Minneapolis
- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole D'Oleo

QUALIFIERS

Project: BRANCH AP-BCD

Pace Project No.: 92585977

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

BC The same analyte was detected in an associated blank at a concentration above 1/2 the reporting limit but below the laboratory reporting limit.

H3 Sample was received or analysis requested beyond the recognized method holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.

RE: Project: BRANCH AP-BCD
Pace Project No.: 92563226

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 23, 2021 and September 29, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Nicole D'Oleo

QUALIFIERS

Project: BRANCH AP-BCD

Pace Project No.: 92563226

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: BRANCH BCD NETWORK
Pace Project No.: 92525375

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between March 03, 2021 and March 05, 2021. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

QUALIFIERS

Project: BRANCH BCD NETWORK

Pace Project No.: 92525375

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

RE: Project: BRANCH BCD NETWORK
Pace Project No.: 92495653

Dear Joju Abraham:

Enclosed are the analytical results for sample(s) received by the laboratory between September 16, 2020 and September 18, 2020. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Asheville
- Pace Analytical Services - Charlotte
- Pace Analytical Services - Peachtree Corners, GA

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Kevin Herring

QUALIFIERS

Project: BRANCH BCD NETWORK

Pace Project No.: 92495653

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

Acid preservation may not be appropriate for 2 Chloroethylvinyl ether.

A separate vial preserved to a pH of 4-5 is recommended in SW846 Chapter 4 for the analysis of Acrolein and Acrylonitrile by EPA Method 8260.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

H1 Analysis conducted outside the EPA method holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

Sample Condition Upon Receipt

Client Name: GA Power

WO#: **92495653**

Courier: Fed Ex UPS USPS Client Commercial Pace Oth

Tracking #: _____ Custody Seal on Cooler/Box Present: yes no Seals intact: yes no Proj. Name: _____

Packing Material: Bubble Wrap Bubble Bags None Other _____

Thermometer Used 2/4 Type of Ice: Wet Blue None Samples on ice, cooling process has begun

Cooler Temperature 0.8 Biological Tissue is Frozen: Yes No Date and Initials of person examining contents: 9/16/2004
Temp should be above freezing to 6°C Comments:

Chain of Custody Present:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.
Chain of Custody Filled Out:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	2.
Chain of Custody Relinquished:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	3.
Sampler Name & Signature on COC:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	4.
Samples Arrived within Hold Time:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.
Short Hold Time Analysis (<72hr):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	6.
Rush Turn Around Time Requested:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	7.
Sufficient Volume:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	8.
Correct Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	9.
-Pace Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Containers Intact:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	10.
Filtered volume received for Dissolved tests	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	11.
Sample Labels match COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	12.
-Includes date/time/ID/Analysis Matrix:	<u>W</u>	
All containers needing preservation have been checked.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	13.
All containers needing preservation are found to be in compliance with EPA recommendation.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
exceptions: VOA, coliform, TOC, O&G, WI-DRO (water)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	Initial when completed
		Lot # of added preservative
Samples checked for dechlorination:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	14.
Headspace in VOA Vials (>6mm):	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	15.
Trip Blank Present:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	16.
Trip Blank Custody Seals Present	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	
Pace Trip Blank Lot # (if purchased):		

Client Notification/ Resolution: _____ Field Data Required? Y / N

Person Contacted: _____ Date/Time: _____

Comments/ Resolution: _____

Project Manager Review: _____ Date: _____

Note: Whenever there is a discrepancy affecting North Carolina compliance samples, a copy of this form will be sent to the North Carolina DEHNR Certification Office (i.e. out of hold, incorrect preservative, out of temp, incorrect containers)
