Tetra Tech verifies the correct laboratory analysis methods were used, any applicable permit limits have been met and other results are protective of Georgia EPD's water quality standards. Daily Min and Daily Max are the lowest and highest values for any day in the month. Daily Avg is the arithmetic average of all daily values during the entire month. ND = Not Detected (below the lab's reporting limit).

ND = Not Detected (below the lab's reporting limit).
Turbidity and total residual chlorine are monitored continuously. The value reported is the weekly maximum and the daily average is the average of the weekly maximum values reported.
Calculated Receiving Water Concentration shows the effluent concentration at the discharge once it has fully mixed in the receiving waterbody. This value is calculated as a dissolved concentration for an appropriate comparison to the numeric water quality criteria, which are also in the discharge of the weekly maximum values reported.
Calculated Receiving Water Concentration shows the effluent concentrations are not translated into Calculated Receiving Water Concentrations.
Numeric Water Quality Criteria is the maximum concentration of a parameter (calculated at a dafath transfers of 50 mgL as calculated reactiving waterbody that will be protective of the designated use per Georgia EPD's rules and regulations. Calculated Receiving Water Concentrations is for high are protective of the waterbody.
Acute (brot-term) water quality criterion shows is for Hexavalent Chromium.
The numeric water quality criterion shows is for Hexavalent Chromium.
The numeric water quality criteria show are the chronic (ing-term) water quality criterion to be compared with the average calculated receiving water concentration.
The numeric water quality criteria show are the chronic (ing-term) water quality criterion.
The numeric water quality criteria show are the chronic (ing-term) water quality criterion.
Numeric water quality criteria show are not thread on the numeric water are the chronic (long-term) water quality criterion.
The numeric water quality criteria show are the chronic (ing-term) water quality criterion.
The numeric water quality criteria show are the chronic (ing-term) water quality criterion.

mg/L = milligrams per liter = parts per million; µg/L = micrograms per liter = parts per billion; ng/L = nanograms per liter = parts per trillion; SU = Standard Units; MGD = Million Gallons Day

1 Tetra Tech verifies the correct laboratory analysis methods were used.

2 Lake Sinclair measured upstream near lat 33.196636 and long -83.295389, and downstream near lat 33.180392 and long -83.322964.

3 Metals results are total recoverable.

4 ND = Non-detect.

\*\*\* = Not Applicable.
