

## PVC FISH ATTRACTOR TREE

### Materials:

- 16, 5 ft. pieces of  $\frac{3}{4}$ " diameter PVC
- 5 gal. plastic bucket with wire handle.
- Concrete (suggest using concrete with pea gravel)

### Construction:

- 1) Place PVC in bucket.
- 2) Arrange pieces so they are spread out and wire handle is upright in middle.
- 3) Fill bucket half way with concrete and allow to cure.

Note: Place several buckets close together in one locality of the reservoir in 13-15 feet of water and away from any structure where people might swim or dive. The location should have minimal flow and a level bottom to prevent movement of the buckets. They can be lowered from a boat using the bucket handle to insure vertical placement.
